PROFESSIONAL SUMMARY

Backend Software Engineer with 3+ years of production experience building scalable server-side systems in Node.js, NestJS, and TypeScript. Proven track record across RESTful API design, CQRS architecture, async job processing, caching, and containerised deployments. Experienced integrating third-party providers including Stripe, Moneris, Google OAuth 2.0, RabbitMQ, and OpenAI. Available for full-time remote roles, with 4+ hours of overlap with US/EU working hours.

PROFESSIONAL EXPERIENCE

Mid-Level Backend Engineer · Excel Technologies Ltd.

November 2022 – Present

Dhaka, Bangladesh

- Core engineer on ArcOne, a multi-service NestJS + MongoDB enterprise Sales-Force-Automation & HRM platform — a wide range of REST controllers spanning numerous business domains (sales orders, quotations, inventory/stock, field-force check-in & journey plans, attendance, leave, and expense claims).
- Designed event-driven communication across NestJS microservices using RabbitMQ messaging, BullMQ background-job queues, and a dedicated Redis caching service, decoupling email/push-notification delivery and heavy reads from the main API.
- Built a Redis (ioredis / RedisSearch) caching layer with event-driven cache invalidation on high-frequency endpoints, cutting redundant MongoDB queries on hot read paths.
- Delivered the Excel Reward Portal (NestJS CQRS, MongoDB 3-node replica set, Redis) — reward-points earn/redeem/transfer, OTP/2FA (otplib/speakeasy), real-time support chat over socket.io (Redis-adapter scaled), and Puppeteer PDF reporting.
- Architected a distributed cloud-printing platform (9 NestJS microservices, PostgreSQL database-per-service) using MQTT for on-prem printer agents and a Redis-Streams event bus with an outbox pattern and dead-letter replay for reliable delivery.
- Integrated third-party systems: Stripe payments with webhook validation (order-tracking service), ERPNext/Frappe via webhooks for the RMA/warranty system, SMTP/ZeptoMail email + Expo push notifications, and AWS S3 / MinIO object storage.
- Containerised all services with Docker & Docker Compose across dev/staging/production behind Nginx reverse proxies, with GitHub Actions CI/CD image build-and-push, Sentry, and Terminus health checks.

Backend Engineer, Contract · PixelVega Limited

May 2024 – May 2026

Remote — Dhaka, Bangladesh

- Developed and maintained NestJS/TypeScript backend services for a travel agency platform, a B2B pricing portal, and an accessible-transportation platform, covering auth, bookings, payments, dispatch, invoicing, and settlements.
- Implemented CQRS architecture and built data-access layers with PostgreSQL + Drizzle ORM, including schema migrations, and added multi-factor authentication (TOTP/email/SMS) with RBAC guards to secure sensitive booking and pricing operations.
- Integrated Stripe, Amadeus (flight search & booking), and Hotelbeds (hotel inventory) into the travel platform, and separately integrated Firebase, Elasticsearch, and Gemini AI categorisation for a middleware service handling referrals, notifications, and analytics.
- Added Redis caching and JWT-based auth with HttpOnly refresh cookies, token rotation, and sliding sessions, plus global exception handling and layered guards across customer- and partner-facing APIs.
- Built background email job queues for dispatch and reminder notifications, and designed async audit logging to track pricing changes and B2B inquiry lifecycle events.
- Delivered Swagger/OpenAPI documentation, modular environment-based configuration, and Docker deployment support, streamlining onboarding for developers and third-party integration partners.

Co-Founder & Backend Engineer, Part-time · Nexarift Software Solutions

November 2022 – Present

Remote — Dhaka, Bangladesh

- Architected and delivered production backend services in Node.js/NestJS & Express (TypeScript) using Clean/Hexagonal DDD and CQRS, spanning a transportation-booking platform, a multi-tenant accounting SaaS, e-commerce marketplaces, and a B2B pricing portal.
- Reduced redundant database reads by introducing a Redis caching layer across high-traffic services (booking, marketplace catalog), cutting repeat queries on high-frequency endpoints.
- Built async, event-driven pipelines with RabbitMQ and BullMQ + Redis — decoupling order processing, notifications, and reminders into dedicated worker services with a transactional outbox pattern, reducing request latency on critical checkout/dispatch paths.
- Integrated 6+ third-party providers — Stripe & Moneris (payments), Google OAuth 2.0, Firebase (push), and AWS S3/SES — with retry logic and webhook signature validation to reduce failed transactions.
- Engineered multi-tenant isolation using PostgreSQL Row-Level Security with per-request tenant context, plus hardened auth (JWT, Argon2/bcrypt, TOTP 2FA, RBAC, refresh-token rotation, throttling) across all customer-facing APIs.

- Containerized services with Docker & Docker Compose across dev, staging, and production in Turborepo/pnpm monorepos, and delivered real-time features via Socket.io (live dispatch boards, call-center dashboards, in-app chat) backed by the Redis adapter.

KEY PROJECTS

Excel Reward Portal (ISP Loyalty & Rewards Platform) | NestJS · MongoDB · Redis · BullMQ · Kafka · Socket.IO · Jest

Core Engineer & Lead Backend Developer | Proprietary — Excel Technologies Ltd.

- Architected a CQRS-based modular backend powering reward-points earn/redeem/transfer and role-based ISP-owner/employee/dealer portals, with OTP/2FA, real-time support chat via Socket.IO, async BullMQ + Redis jobs, and Puppeteer PDF reporting.

ARConc ERP / HRM Platform | NestJS · MongoDB · Redis · BullMQ · RabbitMQ · Socket.IO · Jest

Lead Backend Developer | Proprietary — Excel Technologies Ltd.

- Architected a modular backend covering attendance, payroll, CRM, sales, invoicing, and inventory for ~200 concurrent internal users, with async job processing via BullMQ + Redis/RabbitMQ, real-time updates via Socket.IO, and Jest e2e coverage.

Excel Restaurant POS (Frappe/ERPNext-based POS Platform) | Frappe · ERPNext · Python · MariaDB · Redis · Socket.IO · Docker Swarm

Backend Developer | Proprietary — Excel Technologies Ltd.

- Built a custom Frappe/ERPNext app with 40+ doctypes covering POS counters, menu management, offers, and cash audit, exposed via JWT-secured REST APIs to web and mobile apps, with Clover payment and Uber Direct delivery integrations and real-time Socket.IO order updates.

MyRivr-Middleware | Node.js · Express · Firebase · Stripe · Elasticsearch · Gemini AI

Backend Developer | Proprietary — PixelVega Limited

- Built a modular Node.js/Express backend for auth, referrals, notifications, and analytics, integrating Stripe, Elasticsearch, and Gemini AI categorisation for smarter content and user segmentation.

B2B Pricing Portal | NestJS · PostgreSQL · Drizzle ORM · CQRS · JWT · Docker

Backend Developer | Proprietary — Nexarift Software Solutions

- Built a product-catalogue and role-based pricing API covering SKU master data, tiered/quantity-band pricing, and B2B inquiry lifecycle, secured with JWT (HttpOnly refresh cookies, token rotation, sliding sessions) and async audit logging.

GTA Accessible Transportation | NestJS · MongoDB · JWT · MFA · Twilio · Docker

Backend Developer | Proprietary — Nexarift Software Solutions

- Built a modular REST API for transport operations — bookings, dispatch, invoices, and analytics dashboards — with a full booking lifecycle (quote → dispatch → completion), MFA (TOTP/email/SMS), and RBAC guards.

Kids-AI — Interactive Storytelling | NestJS · LangChain · OpenAI API · MongoDB

Sole Backend Developer | Proprietary — PixelVega Limited

- Built an AI-powered storytelling platform using OpenAI via LangChain, designing a content-safety prompt layer that ensured all LLM output remained age-appropriate throughout beta testing.

TECHNICAL SKILLS

Languages & Runtimes: TypeScript, JavaScript (ES2022+), Node.js, NestJS, Express.js

Databases & ORMs: MongoDB (Mongoose), PostgreSQL (Prisma, Drizzle)

Infrastructure: Redis, RabbitMQ, BullMQ, Docker, Docker Swarm, AWS S3

Architecture: RESTful API, CQRS, Event-driven, Clean Architecture

Security & Auth: JWT, OAuth 2.0, 2FA / TOTP, RBAC, Helmet, Rate Limiting

Integrations: Stripe, Amadeus, Hotelbeds, Twilio, OpenAI, Gemini AI, Elasticsearch, Firebase

DevOps & Tooling: Git, CI/CD, Docker, Swagger/OpenAPI, Jest, Agile/Scrum

Frontend (Working Knowledge): React, Next.js, Zustand, SWR, TanStack Query, RTK Query, Python

AI / LLM Engineering: LangChain, LangGraph, OpenAI API, Gemini AI, Prompt Engineering

CERTIFICATIONS

- LangChain for LLM Application Development — Coursera / DeepLearning.AI (2024)
- Complete Python Mastery — Code with Mosh (2023)
- Fullstack Web Development with MERN — Stack Learner (2022)
- AWS Certified Solutions Architect — Pluralsight [In Progress]

EDUCATION

Bachelor of Business Administration (BBA) — Finance & Banking

2022

Higher Secondary Certificate (HSC) — Business Studies

Ananda Mohan College, Mymensingh

2018
